

## VOICE/DATA DIVISION

---

Ino-Tek Electric's voice/data division provides relocations/modifications to existing technology systems, new installations, and maintenance on existing systems. All of this service is provided with state-of-the-art installation practices and test equipment. All installations are fully tested to meet or exceed industry standards.

Ino-Tek Electric's staff includes certified Hellermann Tyton and Leviton installers.

These certified professionals have successfully completed the course offered by each manufacturer. Each BICSI RCDD has continuous access to the most current industry trends in an effort to minimize the impact of design changes.

---

Ino-Tek Electric's exceptional customer service and attention to detail has allowed us to be more competitive, to expand customer services, and to guarantee long-term support to our clients. Ino-Tek Electric still communicates with clients one-on-one with the same familiar management team. At Ino-Tek Electric we view the major goal in electrical construction to be the effective integration of the owner's needs, quality installation and service, least possible cost, safety, and timely project scheduling. This philosophy is beneficial to the owner, designer, and the construction team.

Ino-Tek Electric is focused on the start-to –finish solutions. As a single-source provider we can handle projects that fall into multiple market categories in a broad range of project sizes and technical complexities. We normally perform all electrical construction and voice/data system installation with our own forces, except for utilization of diversity program subcontractors.

---

Today Ino-Tek Electric provides services across British Columbia. Our mission is 'to be the best provider of electrical and data/voice construction and service as recognized by our clients, our employees, and our community'.

Ino-Tek Electric maintains leading edge technology in our industry by building the team. Our management program sets the industry standard in the areas of benchmarking, continual process improvement, teamwork, and communication. Our ongoing training of employees in these areas helps us to assure our customers of a high quality, cost effective program 'on time', and 'every time'. We work hard to ensure our service exceeds your expectations.

## SAFETY

The inherent hazards of electrical work and construction projects in general make safety a critical issue in the protection of people and the cost of the project. Ino-Tek Electric has always maintained an intensive safety program and is very proud of the safety record we have achieved.

*Ino-Tek Electric has had continuous WCB coverage since July 22, 1987 and our account is currently active and in good standing.*

## THE TEAM

Ino-Tek Electric's service department operates a fleet of over 10 fully-equipped service vans manned by technicians and available 24 hours per day, 7 days per week. Some clients may have specific contacts per account assignments to service department staff depending on the magnitude and frequency of clients needs. Ino-Tek Electric provides cell phones to our employees for ease of communication internally and with our clients. Our service Technicians are fully equipped, tooled and trained to handle any type of job, at any time, and anywhere. Their services include complete installations, technical support and troubleshooting.
